

Anti-tack for Pre-cured Treads

PROMOL 2811E

PROMOL 2811E is a silicone free combination of an anti-tack, a lubricant and a mould release for application on uncured tread strips. PROMOL 2811E is applied after the cooling section on the surface of the uncured treads. The dried film provides good separating effect, compound flow, deaeration and supports mould release.

The product offers numerous advantages:

- good separation of compound during storage
- provides sufficient compound lubricity
- gives good deaeration during moulding
- has a good mould release on curing
- has a very high compound compatibility

AVAILABLE PACKAGING

DESCRIPTION	NET QUANTITY
IBCs	1.000 kg
Steel drums	200 kg
HDPE jugs	10/20 kg
