

Anti-tack for Compounds

PROMOL NZ/E2

PROMOL NZ/E2 prevents surface sticking of uncured compound sheets, calendered or extruded articles and crude blanks. PROMOL NZ/E2 provides a very high compound compatibility and the dry coating is usually absorbed completely into the rubber compound during vulcanization.

The product offers numerous advantages:

- very compatible with all kinds of polymers
- low melting point of approx. 123 ° C
- suitable for direct moulding and all kinds of treatment of blanks
- very common product in production of inner tubes, shoe soles and roofing membranes

AVAILABLE PACKAGING

DESCRIPTION	NET QUANTITY
IBCs	1.000 kg
Steel drums	200 kg
HDPE jugs	10/20 kg
HDPE pails	15 kg
